Cross culverts along the entire project length will be evaluated and considered for replacement as required either by condition or hydraulic capacity. At certain selected locations, the roadway will be evaluated to determine if the profile can be raised in order to alleviate local flooding which has occurred mostly due to the lack of adequate pipe size and beaver activity. All of this needs to be balanced against the impacts to the adjacent wetland resource areas and trees which line the roadway. Finally, new pavement markings and signage will be installed to delineate travel on the new roadway. - 01	1	CE	Done	1	0	4/7/2009	Yes
