Hello:

It is obvious that humans are destroying the natural world very effectively and quickly.

Developers, loggers, miners, ranchers, the petroleum industry and many others make profits by killing nature.

Everywhere the quality of life is deteriorating, with droughts, fires, loss of forests, rivers drying up, animals dead in the road, the oceans polluted, topsoil gone, groundwater gone.

The love of money, along with rampant human population growth, are causing these problems.

If the government and private individuals do not act now to stop those who rape Mother Earth, we will be living in a science fiction world- bleak, dead, and forlorn- within the next two decades.

WAKE UP!!!!!!!!!!!!!!!!!!!!!!!!!!!!
