Question: A1

Response:

I just wanted to say that this "task force" should in no way think their job is to lessen the environmental restrictions contained in the environmental protection act. The Act is a 37 yr old law that has been extremely successful in improving environmental standards in the US. Nevertheless, being 37 years old, it is no longer in time with current environmental problems. It needs to be strengthened to reflect the growing public and scientific preoccupation about environmental standards.
