Subject: Nepa review

09/17/02 01:44 PM

I firmly believe that the Nepa process is important to re assuring the public that there is an effort to protect the environment. Money can buy most things including the destruction of the environment, and most people do not trust large corporate business as it is. By following the Nepa process it can be shown that there was an attempt to consider environmental degradation prior to acting. As a government I feel it is your responsibility to uphold NEPA as guardians of our environment for the use of future generations.
